Web programming LAB II

Lec (1)-Discussion

Name: الحسين داود سلمان

Stage: المرحلة الرابعة

Branch: معلومات – صباحي

Lecture 1

Discussion: -

1. After installing XAMPP application and if you need to save your PHP files on your PC, in what a place can you save it and in what extension for these files?

Ans/ Save PHP files in the "htdocs" directory of your XAMPP installation, with a ".php" extension.

2. htdocs is acronyms for what?

Ans/ "htdocs" stands for "Hypertext Access."

3. Suppose your PC is running with Windows operating system, can you install MAMP package on it? Explain your answer.

Ans/ No, MAMP is designed for macOS, but you can use XAMPP for Windows.

4. Give me some examples about some web sites that are built with PHP.

A/ Examples of websites:

1)Facebook.

2)Wikipedia.

5. As you remember, JavaScript is a popular client-side programming language and it has the ability to change the content and style of a web page dynamically. One question you may be asking is, "Why do we need a server-side programming language, too?"

Lecture 1

A/ While JavaScript handles client-side interactions, server-side languages like PHP are necessary for processing data, interacting with databases, and performing server-side operations.
